

Adding custom lists Guide

How to add custom masking lists Guide for UDS Business Data Masking.

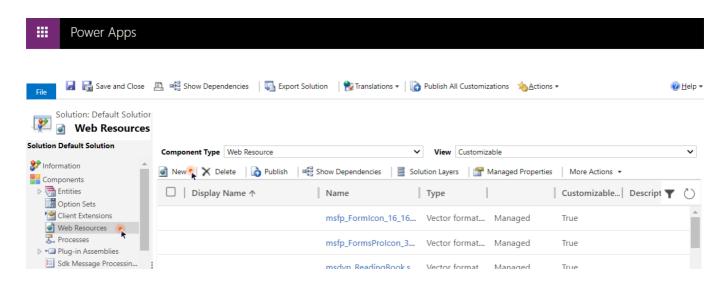

Steps for uploading your own data masking lists to the system.

- 1. Prepare a list. For example, find a list of company names on the Internet.
- **2.** Paste the list into any text editor (Notepad, Notepad++, etc.). And save as "anyname.bdm.html" without spaces with HTML extension. Use a unique name, don't use the names existing in the system, they will NOT be accepted.
- **3.** Open the **Settings** menu in Dynamics 365, select **Customizations**, and then **Customize the System**.

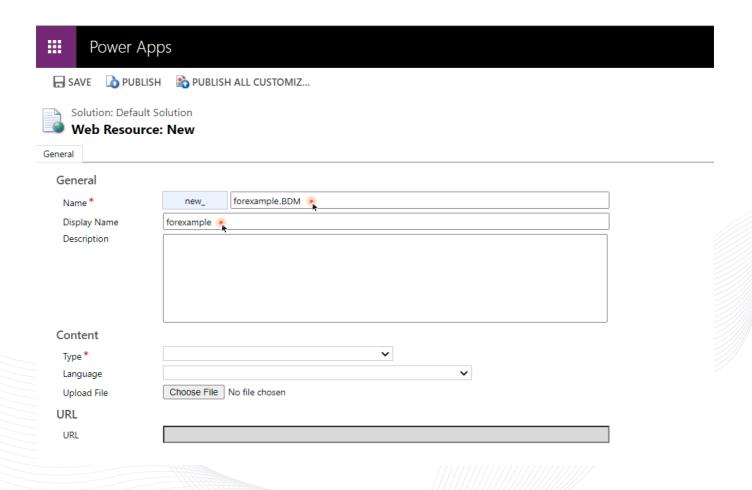

4. Select Web resources and click New.

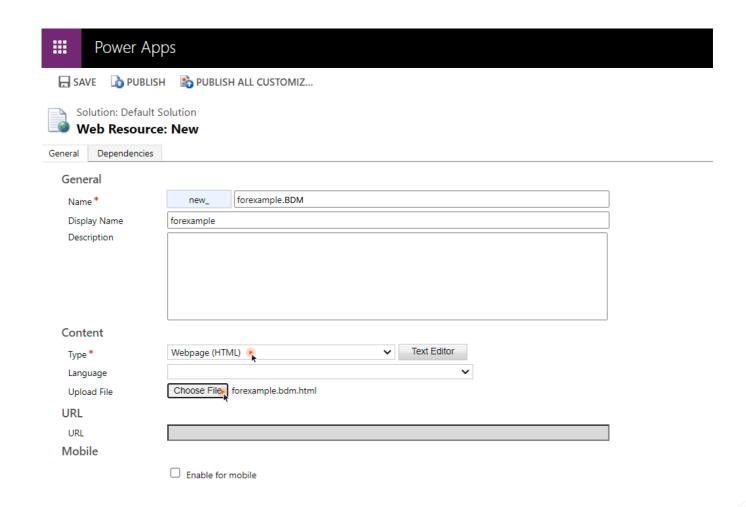

5. Enter **Name** as "anyname.BDM" and **Display name**. The web resource name must also be unique.

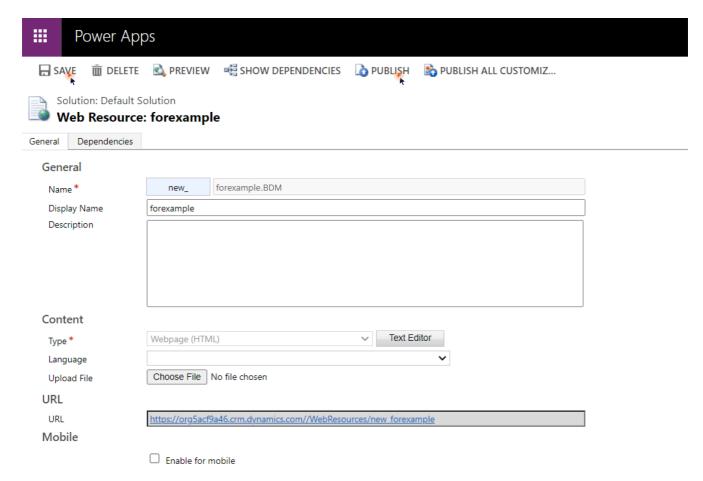

6. Choose **Type > Webpage (HTML)**. Click **Choose File** to upload the saved file to the system.

Warning! To prevent formatting, don't click the Text Editor button.

7. Click Save, then click Publish.

8. Refresh the page with lists in the UDS Business Data Masking. The added list should appear there.

We appreciate you for determining on our solutions.
